Security to Access

Edition 5

Catalogue

Keeping people safe since 1985

Since inception, the CDVI team has grown to become a global business. Now with 11 sales offices and over 300 people, our reach is worldwide.

Our commitment to you

We manufacture high performance access control solutions that make people's lives easier. Hundreds of products are backed by a 10-year warranty.

Quality in every single detail

Delivering best-in-class products is our top priority. We take testing seriously. Every key on every keypad is individually tested before it reaches the customer.

We are here for you

We are dedicated to providing expert technical support and training to our customers. Wherever you are, we speak your language and we always go the extra mile to help.

Together, we're on a mission to deliver secure, reliable, and user-friendly access control to as many doors as we can.

Paul Ramsay, General Manager

Dear Reader,

Thank you for picking up this copy of the CDVI catalogue. I hope that it will be a useful and informative directory of our wide range of access control products and solutions.

My name is Paul, and I am the General Manager of CDVI in the UK. We are part of a global CDVI Group which is headquartered in Paris. Together, we're on a mission to deliver secure, reliable, and user-friendly access control to as many doors as we can.

This catalogue contains more than 500 products. From robust maglocks to high tech access control, next-generation biometrics, and discreet door automation, you'll find something for every project. We've organised it into categories to make things easier to find – check the Contents list on page 3. This edition of our catalogue contains more information than ever before. It's your go-to index of access control solutions, with detailed technical specifications, regulatory certifications, key features, and more.

Catalogue Highlights

I would like to draw your attention to some of the exciting additions to this catalogue. First of all, there's our ATRIUM online access control solution, which you'll find on page 6. ATRIUM delivers a unique combination of security and convenience, and puts you in control of your system. It's non-PC dependent, meaning you're no longer shackled to a single on-site computer for system administration. And it's a true two-door system. Every ATRIUM A22K controller supports up to two doors, whether your site needs a read in & RTE out format or a read in & read out solution. That means installing is quicker and more convenient, with less

disruptive cable-laying. And the less time needed for the installation, the greater the cost savings for you and your customers.

Next, there's ievo biometrics. With both fingerprint and facial recognition solutions, ievo delivers the ultimate in user convenience. Plus, ievo readers integrate with a wide range of access control and time & attendance systems, including ATRIUM. You're delivering your customers the peace of mind of security, accuracy, and reliability with ievo biometrics. Check out pages 50 to 59 for more information.

And finally, DIGIWAY is our fantastic door automation solution for swing doors. You'll find this section on pages 60 to 73. Smooth operation, a sleek design, and door operators tested to more than two million cycles make DIGIWAY a reliable and durable choice. To put that in context, in a building with 50 people using the door to enter in the morning and leave in the evening, that's enough cycles to last more than 56 years!

All for one, one for all

Our CDVI Group motto is "all for one, one for all" – and that applies to you, too! Delivering top quality products and exceptional service to our customers is our top priority. We're always here to help and we look forward to working with you!

Kind regards,
Paul Ramsay
General Manager

INSTALLER SUPPORT

Do you need assistance? You're not alone! There's many ways to get in touch with our Technical Support Team. We're available from **8:45am to 5:15pm** Monday to Friday.

Support Centre

The Support Centre is an ever-growing library of FAQs and helpful videos to make it easy for you to solve queries independently.

Visit support.cdvi.co.uk or CDVI UK's YouTube page at youtube.com/c/cdviuk

Phone

Call us from 8:45am-5:15pm Monday to Friday for direct help from our in-house product experts.

Call **+44 (0)1628 531 300**

Web Chat

For quick questions and advice, visit our website and get in touch using our web chat service during normal opening hours.

Visit www.cdvi.co.uk

Email

If you have a question outside our normal hours, send us an email with your query. Photos are always helpful!

Email technical@cdvi.co.uk

Returns

Submit the form on our website to process RMA requests. For urgent requests send an email to returns@cdvi.co.uk.

Earn CPD points!

CPD stands for Continuing Professional Development. It's a process of learning and growing your skills and knowledge as you work.

END-TO-END ENCRYPTION

AES stands for Advanced Encryption Standard. It is a type of cypher that protects the transfer of data through the internet. A cypher protects data by transforming the message in order to conceal its meaning.

Since being adopted by the United States government as its preferred method of encryption, AES has become a worldwide standard and one of the most common encryption protocols.

There are three possible key lengths in AES encryption: 128-bit, 192-bit, and 256-bit. the higher the bit-rate, the more possibilities of key combinations there are, and the higher the level of security. AES256 is virtually impenetrable using brute force methods, making it one of the most popular and trusted encryption solutions globally.

ATRIUM & KRYPTO

- 2-door controller, 500 doors
- Floorplan Manager software
- 10,000 users
- One-click interlock for creating a secure area between doors
- Web-based management software for easy daily administration
- Immediate email alerts when specific security events occur
- Integrations: Texecom, Aperio, ievo, Schlage...
- Anti-passback to prevent sharing or stealing of credentials

- High security ecosystem of ATRIUM
- Utilises end-to-end AES encryption
- KRYPTO makes card cloning a thing of the past
- Unique authentication keys created by CDVI's algorithm
- No configuration card required - it works right out of the box

ATRIUM KRYPTO

CDVI's High Security Online Access Control System

ATRIUM is a web-based access control system designed for easy installation and user convenience. It includes a free, user-friendly app and management software for fast, reliable control of single or multiple sites. Supporting up to 500 doors and 10,000 users, ATRIUM allows customised access control across different levels, ensuring both building-wide security and detailed internal access management. It also integrates smoothly with CCTV and security alarm systems for comprehensive oversight.

Powered by KRYPTO, ATRIUM ensures ultra-secure, end-to-end AES encryption for data communications, safeguarding information from credential to server. With automatic unique authentication keys, KRYPTO offers immediate high-security setup with no programming or complex setup needed. This system enables security managers to trust in consistent, accurate, and reliable protection for people, assets, and data in any environment.

A22K | High security encrypted 2-door controller

KRYPTO

HIGH SECURITY SOLUTION

The A22K controller is the key component of CDVI's high security KRYPTO solution, with end-to-end military-grade encryption built in. The A22K makes high security mainstream and accessible for a range of industries. The KRYPTO solution eradicates the risk of card cloning and ensures that user data is kept safe and private.

IP2X

-20°C to +70°C

- Management:** Software & web-based
- Capacity:** 2 doors per controller, 500 doors, 10,000 users
- Site management:** Multiple site connection to one account (if each site has 49 controllers or less)*

*VPN needed for remote site connection.

ACCESSORIES

KPROG
Desktop card enrolment device for ATRIUM

AIOM
10 input/output module

RELATED PRODUCTS

A22KPOE
High security PoE Ultra controller/expander

K4
Narrow high security encrypted MIFARE® DESFire® EV2 reader/keypad

	A22K
MATERIAL	Robust lockable metal case
MOUNTING	Surface
TECHNOLOGY	Compatible with proximity, MIFARE, and DESFire EV1/EV2 readers and credentials
SECURITY LEVEL	High security
USER LIMIT	Up to 10,000 users
TIME DELAY	From 1 to 254 sec
FREQUENCY	50/60Hz
DIMENSIONS	280 x 290 x 80 mm (case) / 124 x 199 x 30 mm (unit)
WEIGHT	3.16 kg
POWER SUPPLY	120 - 240 Vac
BATTERY	1x 12Vdc, 4.5Ah or 7Ah gel type battery

AFPLAN | ATRIUM Floorplan Manager licence

- View door status on a floorplan in real time from any web browser on any device
- Activate all door options in real time (locked, unlocked, access granted, etc)
- Easy to configure drag-and-drop interface
- Supports .jpg or .png file (1MB maximum upload)
- One Floorplan Manager per site
- Compatible with A22K encrypted controller only

ACPR | Numberplate recognition interface

- Compatible with any numberplate recognition camera with a 26-bit Wiegand output
- Assign vehicle registration plates to users in ATRIUM
- Ideal for securing residential or parking facilities
- Seamless single security environment
- Part of a comprehensive building management strategy

AVISION | CCTV interface module for ATRIUM access control

- CCTV interface for ATRIUM access control
- Compatible with Hikvision, Dahua, and ONVIF protocol cameras
- Live video streaming for up to 4 channels at a time
- Trigger CCTV pop-ups when access events occur
- Easy card-based licensing and registration

Each A22K controller can be set in one of three modes: master, sub, or expander.

Master Controller

The master controller is the first one in your system architecture. Everything else is configured from the master. For a one-door or two-door system, you will only have a master controller.

Sub-Controller (Default Setting)

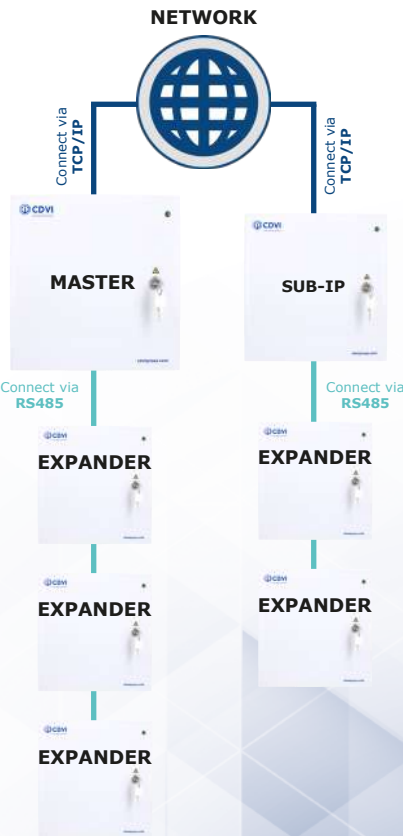

Sub-controllers are connected to the network hub via TCP/IP. You can network up to 49 additional controllers as sub-IP controllers underneath the master.

Expander Controller

An expander controller is connected to either the master or a sub-controller via RS485. For every master or sub-controller, 4 expander controllers can be connected.

SYSTEM CAPACITY

You can choose how you build your ATRIUM system depending on the requirements of your project. For example, let's say you have 14 doors to control, and you're using A22K high security controllers in a read-in & read out format. Your two options are:

Scaling up ATRIUM systems

For every master or sub-controller, you can add up to 4 expander controllers and network up to 49 sub-controllers to your master controller.

That means that in total, if you had one master and 49 sub-controllers, each with 4 expander controllers connected to them, you could control 500 doors read in & read out or read in & RTE out. In both cases, ATRIUM controls 500 doors. The A22K is a true 2-door and 4-reader controller.

Doors	1	2	3	4	5	6	7	8	9	10
A22K	1	1	2	2	3	3	4	4	5	5
Readers	2	4	6	8	10	12	14	16	18	20

- For initial setup of ATRIUM modules
- Locate the access control unit (ACU) on the network (LAN)
- Modify IP address settings
- Available as Windows software or as a mobile app

- Ideal for day-to-day management of ATRIUM access control
- Accessible from any device when connected on the same network
- No client licence required
- Web browser based - no operating system limitations

- Set up advanced settings on the ATRIUM access control system
- Included in the software download file with ATRIUM Finder
- Recommended for initial setup
- Automatically synchronises with the ATRIUM web browser when turned on
- Live view of site when connected

Helps you locate the controller on the network for initial setup of your site.

Great for day-to-day activities such as: door & area management, event checks, management of credentials and users, lift control management, roll-call reports.

Advanced features include: access modes, relay setup, inputs, macros, lift control setup, full report generation (events, T&A), backups, lockdown feature, ievio isync integration

Up to 500 doors

Up to 10,000 users

Up to 1000 access levels

Up to 250 schedules

Up to 100 holidays

Up to 256 floors

SYSTEM REQUIREMENTS

Computer Requirements

- Processor Type:**
 - x64 Processor: AMD Opteron, AMD Athlon 64, Intel Xeon with Intel EM64T support, Intel Pentium IV with EM64T support
 - x86 Processor: Pentium III-compatible processor or faster
- Processor Speed:**
 - Minimum: x86 Processor: 1.0 GHz, x64 Processor: 1.4 GHz
 - Recommended: 2.0 GHz or faster
 - 1GB RAM (2GB recommended for superior performance)
 - 6GB of hard disk is recommended; more for larger installations
 - Ethernet access either through physical 10/100 Mbps Ethernet port or WiFi

Operating System Requirements

- Windows 10
- Windows 11
- Windows Server 2016

Other (available on the USB)

- .NET Framework 4.5.2
- MS SQL Server Express 2012 (x64 & x86)
- Microsoft Access Database Engine 2010
- VC++ 2015 Redistributable
- VC++ 2017 Redistributable
- Windows Installer 4.5
- Dot NET 4.6.1

A22KITK2 | High security access control kits

A22KITK2

High security access control kit with readers & cards

Kit includes

- ✓ 1x A22K PCB board
- ✓ 2x K2 reader
- ✓ 1x METALD tag
- ✓ 10x BCD card credential
- ✓ 1x ATRIUM software (on USB)

A22KITK2-DM

High security access control kit with readers, cards & maglocks

Kit includes

- ✓ 1x A22K PCB board
- ✓ 2x K2 reader
- ✓ 1x METALD tag
- ✓ 10x BCD card credential
- ✓ 1x ATRIUM software (on USB)
- ✓ 2x V3SR electro-magnetic lock

A22KITK2-DS

High security access control kit with readers, cards & strikes

Kit includes

- ✓ 1x A22K PCB board
- ✓ 2x K2 reader
- ✓ 1x METALD tag
- ✓ 10x BCD card credential
- ✓ 1x ATRIUM software (on USB)
- ✓ 2x ARU-M ANSI strike

Get more hours out of your day with **ATRIUM**

Our 2-door per controller system allows you to cut your installation time in half - giving you more control over your workload

MODULES AND ENROLMENT DEVICES FOR ATRIUM

AIOM

10 input/output module

-20°C to +70°C

- Metal case for better security
- Built-in web server, PSU, and battery charger
- Ample room to make connections
- Up to 20 inputs using zone doubling technology
- Comprehensive LED status indicators
- RS485 connection to A22K

KPROG

Desktop card enrolment device for ATRIUM

IP54 IK10 -40°C to +70°C

- Simplified management of cards and tags
- Plugs directly into PCs via USB
- Compatible with ATRIUM web server and software
- Reads MIFARE Classic and MIFARE DESFire EV2/EV3 credentials
- Visual feedback with LEDs
- Low power consumption

R125USB

Proximity USB enrolment reader for ATRIUM

R1356USB

MIFARE® Classic USB enrolment reader for ATRIUM

- Plug into USB port on your PC
- Quick way to enrol new proximity credentials
- Automatically enters credential code into Card field
- No additional driver required
- Works with Windows 10, Windows 11, and Windows Server 2016
- Portable and easy to transport between multiple sites

CENTAUR built-in modules

- **Pro-Report:** Print detailed reports
- **FrontView:** Live interactive floor plans
- **FrontGuard:** Display real-time visual authentication
- **FrontDesk:** Create, modify, delete, and print cards
- **Locator:** Monitor card holder location in real time
- **WavePlayer:** Play a sound on any system event

SYSTEM FEATURES

T&A management
Ensure authorised access to closed areas. Effectively monitor employee entry, absenteeism, and late arrivals

Guard tour
Check point validation and live alarms for time violations and exception report generation

Standalone operation
Guaranteed system functionality in the event of power failure

Parking management
Manually allocate or free up parking spaces. Activate 'Parking Full' sign when capacity is reached. Reporting generation.

Lift control
Manage permissions to specific floors - up to 64 floors per lift car. One swipe equals one floor selection.

Burglar alarm integration
Only authorised individuals are allowed access to disarm the system.

Video module
Associate an access control event with a video recording from a connected camera. Play back 60 seconds before & after the event. Capture a video frame image.

Visitor management
Monitor and record visitors on the premises. Previous visitors' details are saved for subsequent visits.

Asset management
Keep track of assets and check who is in possession and for how long.

CENTAUR ENTERPRISE

Manage Complex Multi-Sites With CENTAUR

CENTAUR is a sophisticated, integrated access control system developed by CDVI Ltd, offering a comprehensive solution for diverse environments. It is scalable from managing a single door to complex multi-site installations with numerous cardholders, ensuring unmatched flexibility. It supports up to 50,000 user cards and integrates seamlessly with existing systems for cost-effective upgrades, providing a versatile and reliable access control solution.

By replacing traditional keys with access cards, CENTAUR enhances security and streamlines operations. Cards can be deactivated instantly or tagged as lost, stolen, or invalid, and access privileges can be updated in real time without reissuing cards. The system features advanced functionalities like live interactive floorplans, elevator controls, video module integration, time and attendance tracking, parking management, and visitor monitoring. It offers robust security measures, including burglar alarm integration and detailed tracking of individuals. CENTAUR is designed for resilience, with standalone operational capabilities and backup batteries to ensure functionality during power outages.

C900IP | CENTAUR 2-door controller

The C900IP is the core of the CENTAUR access control system, managing up to 2,048 doors per site. It supports 256 schedules and access levels, with a capacity of up to 16,384 credentials per site, including digital fingerprints and codes. An on-board web page for controller address setting and IP address management enhances integration. Installers choose it for enterprise projects for its quality and reliability.

HOW TO CHOOSE THE RIGHT WIEGAND READER

THE THREE TIERS OF SECURITY

What is AES encryption?

AES encryption is a cypher that protects and conceals messages transmitted through the internet. Data is converted into an unreadable format called cyphertext, which is only readable by having the right cryptographic key to decode it into a readable format. The United States government actually selected AES as its official standard for encryption.

WHAT IS A WIEGAND SIGNAL?

The **Wiegand** standard, established in the 1970s, is a widely used wiring protocol in access control systems. It enables communication between a reader (e.g., card or biometric readers) and a controller, transmitting credential data for access decisions.

The **26-bit** Wiegand protocol is the most common variant of the Wiegand protocol, which is now very widely used in access control systems. The 26 bits describe the way the binary code that is transferred through the system is organised:

- **1 parity bit** - this is added to a string of binary code as a means of detecting errors
- **8 bits of facility code** - this defines the company or site.
- **16 bits of ID code** - this is how individual users are defined
- **1 trailing parity bit** - another verification bit to ensure the system is working as expected.

26-bit Wiegand is an open format, meaning that the format description and organisation are freely and publicly available for anyone to view and use. As a result, almost all access control systems are compatible with it.

Wiegand Range of Readers & Keypads

From the stylish and aesthetic to the traditional and robust, CDVI offers a wide range of readers and credentials suitable for any access control project. All our readers benefit from multi-coloured LEDs which give clear visual indications of door status at any time. Designed to be easy to mount, installation is quick and simple, with no complicated programming required.

The range includes standard proximity readers as well as high security MIFARE® DESFire® EV2 options, rigorously tested to the IK10 standard. Access credentials also include both traditional cards and stylish tags equipped with both proximity and MIFARE® DESFire® technology.

High Security

K SERIES | Encrypted MIFARE® DESFire® EV2 readers

K2

K2I

K4

The K Series are sleek high security KRYPTO readers, compatible with MIFARE® DESFire® EV2 credentials. The factory-programmed CDVI protocol and advanced encryption keys ensure end-to-end security between the card, the reader, and the A22K controller, to ensure that card cloning is a thing of the past. The K Series readers are enabled for smartphone connection and Mobile-PASS.

- IP65 IK10 -40°C to +70°C

KCprox-WLC | Stainless steel proximity reader & keypad

This reader combines proximity RFID technology with the added flexibility of a keypad. Users can either present their 125kHz proximity credential or enter a pre-defined PIN code to gain entry. Manufactured in stainless steel, the KCprox-WLC benefits from a robust IP64 rating and low power consumption. The reader gives both audible and visual feedback and is fixed with security screws.

GALEOW | Keypad with Wiegand output

GALEOW

GALEOW BLACK

This keypad combines style with substance. The high-quality Zamak® casing and soft blue backlighting looks good in any environment. Meanwhile, vandal-resistant screws and a robust IP68 and IK10 rating means the GALEOW easily withstands high traffic and outdoor installation. Connect to online access control systems via Wiegand 26-bit or ISO track 2 connections.

IP IP68 IK IK10 t -25°C to +70°C

Environment: Internal or external

Technology: Wiegand, remote smartphone connection

Door status indication: Audible and visual feedback with blinking keypad

DID YOU KNOW?

The GALEO keypad was named when Pascal, the former General Manager of CDVI France, was walking along a beach and saw a round, flat pebble.

In French, a pebble is a 'galet' - this became the iconic **GALEO**.

Protecting your data with AES encryption

AES encryption is a type of cypher that protects and conceals messages transmitted through the internet.

Essentially, data is converted into an unreadable format called cyphertext.

The only way to later read the data is by having the right cryptographic key to decode it into a readable format. In the AES standard, the same key is used to both encrypt and decrypt, meaning it's a simple and efficient method of encryption.

DID YOU KNOW?

The United States government selected AES as its official standard for encryption.

That's a serious endorsement of its level of security!

WHAT LEVEL OF SECURITY DO YOU NEED?

Technology has advanced in leaps and bounds in the security industry. There are now many different protocols and standards for access control systems. Here are some of the most common technologies widely available for credentials:

125 kHz

This is an established piece of technology with a basic level of security.

13.5 MHz

MIFARE® is a brand name referring to the most commonly used type of integrated circuit chips which are inside access credentials.

13.5 MHz

A higher security option which utilises AES encryption to protect the data and prevent card cloning.

CREDENTIALS

CDVI Cards & Tags

Credentials are the things used to validate the identities of users in the access control system. Our range includes all levels of technology, from 125kHz proximity up to high security MIFARE® DESFire® encrypted credentials. The level of security you need depends on the requirements of your site and your customers. The core benefit of our KRYPTO high security credentials is that they render cloning impossible, thanks to the AES encryption they include.

In addition, our range of credentials varies in format to meet the needs of a wide range of projects. From tried and tested swipe cards to handy keyring fobs, there's something for everyone. Our credentials deliver simple and reliable access control by making user convenience a priority. And why not take the opportunity to discover Mobile-PASS? Put access control in the palm of your hand with high security smartphone credentials for MIFARE DESFire EV2 systems. Unlock the door in one of five possible methods – biometric, voice, tap, scan, or automatic. It's never been easier to make access control this convenient.

AMC25 | High security Mobile-PASS smartphone credentials

Flexible, convenient access control at your fingertips.

Mobile-PASS combines simplicity with robust security, allowing authorised users to unlock doors with their smartphone or other smart device. Offering five different methods for triggering the unlock, Mobile-PASS is a convenient remote access solution.

Mobile-PASS is compatible with the ATRIUM A22K high security controller and K series readers (including K2 and K3). Already equipped with end-to-end military grade encryption technology, the system now adds the flexibility of smartphone credentials to its many security benefits.

Activate your mobile credentials in 3 simple steps!

- Activate the AMC25 licence card in the ATRIUM web server or software
- Send a mobile credential to a smartphone by scanning it on a KRYPTO reader installed on-site, via email (includes activation link), or by entering the registration code in the system.
- Finalise the Mobile-PASS activation when your app is detected by a KRYPTO reader on-site

SWITCH AND RELAY CONTACTS

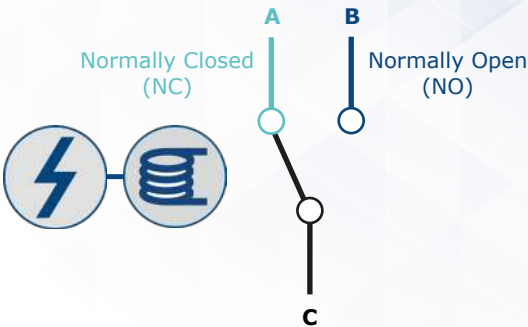

SINGLE POLE SINGLE THROW (SPST)

This type of contact has one normally open or one normally closed contact. When activated by a switch actuator or an energised relay the switch contact changes state.

In this example, when voltage is applied across the relay coil, the contacts **A** and **B** close (activated state). When voltage is removed from the relay coil, the contacts are open (de-activated or resting state).

SINGLE POLE DOUBLE THROW (SPDT)

This type of contact has one normally open and one normally closed contact, also called a changeover contact. When activated by a switch actuator or an energised relay, the switch contact changes state. This type of relay has 3 contacts: a Common (**C**), a Normally Open (**A**) and a Normally Closed (**B**).

In this example, the contacts **A** and **C** close (activated state) and **B** and **C** open. When voltage is removed from the relay coil, the contacts change back to the resting state.

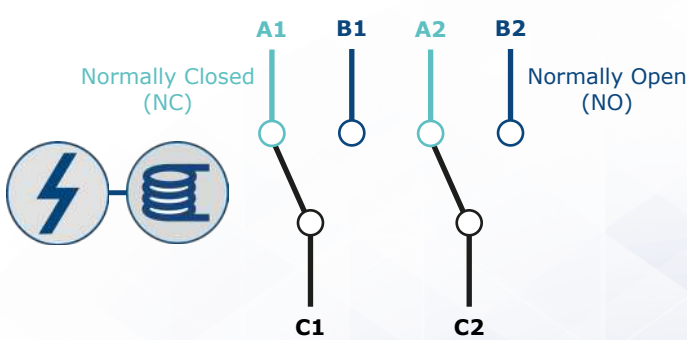

DOUBLE POLE SINGLE THROW (DPST)

This type of contact has two normally open or two normally closed contacts. **A1 + C1** and **A2 + C2**. **A1/C1** are not electrically connected to **A2/C2**. When activated by a switch actuator or an energised relay, the switch contacts change state.

In this example, when voltage is applied across the relay coil, the contacts **A1** and **C1** close at the same time as **A2** and **C2** (activated state). When voltage is removed from the relay coil, the contacts re-open (de-activated or resting state).

DOUBLE POLE DOUBLE THROW (DPDT)

This type of contact has two sets of changeover contacts, two normally open and two normally closed contacts. Each set has 3 contacts: a Common (**C**), a Normally Open (**A**) and a Normally Closed (**B**). **A1, B1, C1** and **A2, B2, C2** are not electrically connected in any way. When activated by a switch actuator or an energised relay, the switch contacts change state.

In this example, when voltage is applied across the relay coil, both sets of contacts change state at the same time; contacts **A1** and **C1** close and **B1** and **C1** open (activated state), contacts **A2** and **C2** close and **B2** and **C2** open. When voltage is removed from the relay coil, the contacts change back to their resting state.

STANDALONE ACCESS CONTROL

Reliable Standalone Readers & Keypads

Standalone access control solutions from CDVI provide a cost-effective and user-friendly way to secure entry points. These systems are perfect for small-scale applications like homes, small businesses, and vacation rentals. By offering options such as standalone controllers and keypads, they allow for effective security without the need for extensive wiring or network infrastructure. This simplicity reduces installation costs and makes them an ideal choice for scenarios where affordability and ease of use are priorities.

These products are available in durable designs suitable for both indoor and outdoor use. Standalone access control is an excellent option for environments where simplicity, reliability, and security are required without the complexity of network-based solutions. Additionally, CDVI's wide range of product choices ensures flexibility to meet unique access needs while maintaining robust functionality.

STANDALONE ACCESS CONTROL

Controllers

Conrollers

DGPROX | Standalone single-door reader & controller

This standalone controller/reader activates with a proximity credential, a PIN code, or multi-factor authentication requiring both card and PIN. The DGPROX offers the flexibility to function as either a controller and reader in its own right, or combined with remote readers located up to 50m away.

IP53

-30°C to +60°C

- Environment:** Internal
- Technology:** Standalone, proximity 125 kHz & PIN
- Door status indication:** Audible and visual feedback with LED

STAR1M | Mullion standalone MIFARE reader & controller

The STAR1M is a 2-in-1 access control solution. It acts either as a standalone controller or as a MIFARE reader as part of an online access control system. In standalone mode, the STAR1M offers the benefit of shadow cards: all issued credentials come with a copy. If a card is lost, stolen, or an employee leaves without returning theirs, simply use the shadow card to invalidate the credential.

BIOMETRICS

Introduction

BENEFITS OF BIOMETRICS AND MSI SENSORS

Benefits of biometrics

- Better security**
Data is extremely difficult to lose or steal
- More compliance**
Make card sharing a thing of the past!
- Less admin**
Quick and easy enrolment of users
- Data protection**
Robust protocols keep data safe and secure
- High reliability**
Best-in-class readers deliver reliable results

Multi-Spectral Imaging

- 9 different light images captured
- 4000 microns images - 4mm deep into the skin
- Sub-surface levels of the finger read
- Clean and clear images
- Captures images through levels of dirt, moist, and some latex gloves

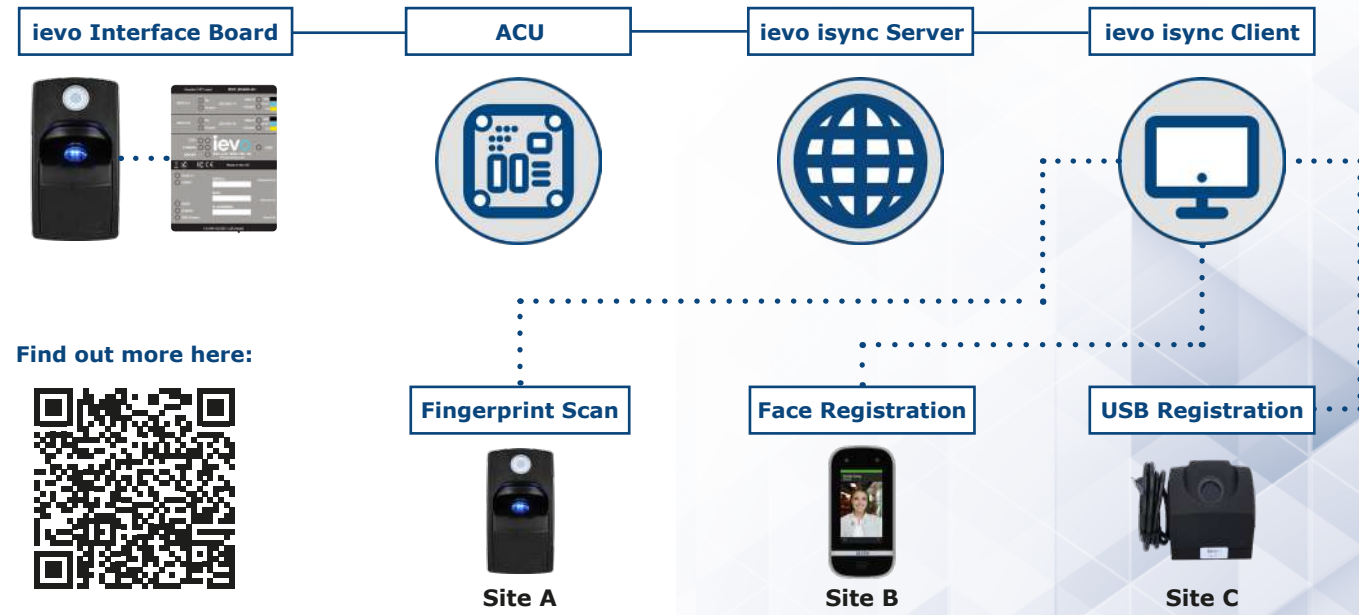

MULTI-SITE MANAGEMENT AND INTEGRATION

ievo isync

ievo isync is an advanced software solution that optimises fingerprint enrolment and distribution while simplifying integration with third-party access control systems.

By actively managing the synchronisation of newly enrolled or deleted fingerprint templates, it ensures that all interface boards remain up to date.

Acting as a bridge between ievo software and access control solutions, isync enhances efficiency by enabling simultaneous fingerprint enrolment across multiple locations, creating a seamless and reliable biometric access control system.

BIOMETRICS

Cutting Edge Technology at Your Fingertips

ievo delivers next-generation biometric solutions for access control, combining advanced security with user-friendly design. Our fingerprint and facial recognition systems enhance convenience and data protection, seamlessly integrating into leading access control and time & attendance systems via our isync software. Our innovative solutions ensure robust security, ease of use, and seamless integration, making them a trusted choice for modern access control.

ievo biometric **fingerprint readers**, like the ievo ultimate™, feature multi-spectral imaging sensors that penetrate beneath the skin's surface, ensuring accurate fingerprint capture even in tough conditions. Up to 100 unique minutiae points are converted into secure templates using proprietary algorithms, with original images erased to prevent reverse engineering. **Facial recognition** technology utilises unique facial structures to verify identities in under a second. The iface™ by CDVI provides fast, hands-free authentication without PINs, cards, or physical tokens—ideal for workplaces like warehouses, hospitals, and care homes where convenience and speed are critical.

The ievo ultimate™ is an NPSA-certified scanner employing a multi-spectral imaging (MSI) sensor. It reads fingerprints through the surface and subsurface levels, even in harsh weather conditions. The ultimate offers optional 128-bit encrypted data transmission to the Interface Board where it matches up to 50,000 fingerprint templates.

IP IP65 IK IK10 t° -20°C to +70°C

- Environment:** Internal or external, medium to high traffic
- Technology:** Standalone or Wiegand connection, optional card reader
- Sensor type:** Multi-spectral imaging (MSI)

WEIGHT	0.13 kg
POWER SUPPLY	12 - 24 Vac/dc
CONSUMPTION	600mA

The micro™ is a compact fingerprint reader designed for internal use and for securing small to medium sized facilities. It uses an optical sensor and 128-bit data transmission, providing highly accurate and quality images to be transferred to the Interface Board, where the data is securely stored. Here it performs 1:N matching of up to 50,000 (10,000 standard) fingerprint templates.

t° 0°C to +60°C

- Environment:** Internal use only, medium to low traffic
- Technology:** Standalone or Wiegand connection, optional card reader

IEVO-MDR

IEVO-UDR

Management: Software based (ievo isync)

Technology: USB desktop connection

Sensor type: Optical or multi-spectral imaging (MSI)

The ievo desktop enrolment units allow administrators to remotely manage the fingerprint enrolment process. Using a USB connection, the units plug directly into a PC, simplifying the registration process. Additionally, the registration units eliminate the need to enrol users via active or in-use readers - an essential solution for a high traffic systems.

IEVO-MDR

IEVO-UDR

DID YOU KNOW?

When enrolling fingerprints with one of our enrolment units, an image is captured. The fingerprint algorithm extracts minutiae points from the image and generates an encrypted binary file.

The image is never saved and is discarded immediately after processing, keeping your biometric data secure.

IEVO-MB | 2-reader ievo interface boards

Management: Software based (ievo isync)

Technology: Standalone or Wiegand connection enabled with RS485 or RS422 outputs

Capacity: 2 readers, 10,000 or 50,000 fingerprint templates

The ievo™ Interface Board is a powerful fingerprint matching system supporting up to 2 ievo fingerprint readers (read in, read out). It acts as the main communication platform for integration, authentication and data processing of 10,000 or 50,000 fingerprint templates. A relay converter can be connected to the Wiegand output to allow direct lock control. The output is Wiegand by default.

Seamlessly integrate ievo with ATRIUM

ievo's isync software enables seamless integration between ievo fingerprint readers and ATRIUM. Enhance your security by combining high-level biometric authentication with robust access control features.

In just one click, isync navigates to the ievo fingerprint registration screen, allowing users to scan and save their fingerprints as access credentials.

INSTALLER TRAINING

Join us at the CDVI Academy for **FREE** installer training and join our extensive list of **Certified Installers!**

CDVI highly recommends installers attend training before starting to install automatic door openers. The EN16005 regulations are complex, and we recommend that installers obtain a full copy of the documentation to read and keep for reference.

EN16005 REGULATIONS

- 1 Complete a risk assessment**

The level of safety provisions required to comply with EN16005 should be determined using a comprehensive risk assessment carried out by a trained installer on-site.
- 2 Provide the end user with documentation**

It is the responsibility of the installer to provide manuals, user guides, and other documentation to the end user of the automatic door.
- 3 Install appropriate safety sensors**

They keep people safe by detecting their presence in areas where they could be at risk from a moving door. For complete safety, both sides of the doors should be monitored.
- 4 Display safety signage**

Users must be made aware clearly that a door opens automatically with signage on both sides of the door stating 'Automatic Door' and another instructing 'Keep Clear'.
- 5 Periodic maintenance**

As the installer, you should perform checks regularly as per the manual instructions. Maintenance will help prevent failures and ensure compliance with safety standards. Particularly in high traffic zones with a lot of moving parts, maintenance is even more critical and should be done more frequently.

CHOOSING THE RIGHT DOOR OPERATOR

DIGIWAY PLUS

Electro-mechanically driven and specifically designed to improve accessibility into and around buildings for people with reduced mobility, making it ideal for residential or care home projects.

DIGIWAY SR

Assisted by a chain-driven spring close mechanism, making it particularly suitable for higher traffic sites. DIGIWAY SR is also fire rated to the EN1634-1 standard for up to 60 minutes.

MAX DOOR WEIGHT	120kg	200kg

DOOR AUTOMATION

Enhance Accessibility with DIGIWAY

DIGIWAY door automation offers unparalleled advantages, blending ease of installation with reliability. Designed for both residential and commercial environments, its two models—DIGIWAY Plus and DIGIWAY SR—cover diverse needs, from low-traffic private spaces to heavy-duty, high-traffic areas. Installers benefit from pre-assembled kits that simplify setup, saving time and effort. The integration of touchless technology, remote smartphone programming, and compatibility with existing access control systems ensures adaptability and modern functionality.

Additionally, DIGIWAY meets stringent EN16005 safety standards, providing assurance of compliance. CDVI supports installers with dedicated training programs, empowering them to deliver superior results. Its versatility, including fire resistance and handling for heavier doors, expands application possibilities while maintaining sleek aesthetics. These features make DIGIWAY an attractive solution for professionals prioritising efficiency, safety, and client satisfaction. By choosing DIGIWAY, installers unlock a user-friendly system that boosts productivity and enables seamless, high-quality installations in various settings.

DWPS102U | Motor-driven door operator for swing doors

DIGIWAY is a reliable, durable, and aesthetic solution for improved mobility in a wide range of environments. The DIGIWAY Plus is a fully automatic motor-return door operator designed for residential and lower-traffic installations. Combining ease of installation with discreet yet efficient operation, DIGIWAY Plus is suitable for people with reduced mobility under SENDA.

IP IP40 t° -10°C to +55°C

Product and technology compliant with the EN16005 standard

Technology: Fully automatic operation for inward or outward opening doors

Cycles: Tested for over 1,000,000 cycles

DWCP | Touch-sensitive control panels for DIGIWAY

The DWCP is a control panel that connects to the DIGIWAY Plus or DIGIWAY SR door operators. It replaces the external side switch of the door operator unit that sets the operating mode of the door. Users can set the operating mode to: 'Automatic', 'Door Free', or 'Door Open'. The DWCP also sets 'Day/Night' mode, disabling the external door sensors at night.

- Switch mode control for DIGIWAY door operators
- Touch-sensitive keys
- Easy to connect and install

CONSUMPTION	110mA

DW-FLATSCAN | Laser safety sensors for swing doors

The DW-FLATSCAN sensors use laser and 'time of flight' technology, rather than traditional infrared models. These sensors generate a 2D or 3D (volumetric) laser curtain, allowing for very discreet installations and improved safety to the door and hinge area. This ensures that the door only moves when the whole pathway is clear.

IP54 -25°C to +60°C

- Product and technology compliant with the EN16005 standard
- Sensor: Laser or volumetric laser
- Easy to connect and install

DW-4SAFE | Infrared safety sensor for swing doors

The DW-4SAFE is an infrared door sensor which fits to the door. It protects users whilst the door is in motion, enabling compliance with the EN16005 standard. The 4SAFE, with two size options, features an intuitive configuration process with time-tested infrared feedback. This enables the device to detect users who interrupt the door's movement, creating a safe automatic entrance.

IP54 -25°C to +55°C

- Product and technology compliant with the EN16005 standard

DWSSS-5M1 | Infrared safety sensor for door automation

The DWSSS-5M1 is a sturdy infrared sensor that is installed on the door leaf itself and protects users whilst the door is in motion by detecting them within the danger zone and triggering the door to halt its operation. Effective sensors are essential for door automation installations complying with the EN16005 standard to ensure protection of users when doors are in their operating cycle.

IP54 -20°C to +60°C

Product and technology compliant with the EN16005 standard

Sensor: Infrared

Easy to connect and install

ACCESSORIES

DWWC-SSS5
Weathershield for DWSSS-5M1 infrared sensor

DID YOU KNOW?

The DWSSS-5M1 utilises **static presence detection** through PSD distance measurement.

It emits six detection spots at a specified distance, which can be adjusted, and includes smart object detection.

When an object enters the spot's field, it disrupts the predefined distance, prompting the sensor to recalculate and stop the door.

	DWSSS-5M1

- ✓ 4x 'Keep clear' safety sign
- ✓ 4x 'Automatic door' safety sign

DIGIWAY BLE

The DIGIWAY BLE is designed for installers, allowing easier operation of the DIGIWAY Plus and DIGIWAY SR automatic swing door operators.

Instead of fiddling with the buttons on the operator (that is usually installed in an inconvenient place out of arm's reach), the app mirrors the readout of the operator's LCD screen, so you can program from a comfy chair instead.

DIGIWAY operators have optional remote mobile connection, which makes programming and fault finding so much easier.

Download the DIGIWAY BLE app for free on the app store today.

DOOR AUTOMATION

Kits

DW-TLC | Toilet door control for door automation

The DW-TLC is a toilet door lock control module operated by two touch-sensitive sensors. It controls entry by locking and unlocking the toilet door at the appropriate times, interfacing with both the automatic door operator and the locking device. The touch-sensitive units make it easy to operate for anyone, including those with limited mobility or dexterity.

Ideal for coupling to DIGIWAY door operators

Touch-sensitive keys

RADIO TRANSMISSION

Introduction

HOW DOES RADIO TRANSMISSION WORK?

KeeLoq® hopping code

This encryption prevents hackers from intercepting radio signals. By constantly changing the access password, it reduces the risk of hacking. Even if a signal is intercepted, the password will have already changed by the time it's used. KeeLoq® employs a 66-bit transmission code with 32-bit encryption, offering nearly **4 billion possible combinations!**

CHOOSING THE RIGHT TRANSMITTERS AND RECEIVERS

It's important to ensure that you've chosen the right transmitters & receivers for your projects. There's a lot to consider, but here are some of the key factors to think about:

Relays

Relays change the state of a circuit. How many circuits do you need to control?

Memory

How many transmitters do you need to have space for in the system?

Technology

Do the modulation types and frequencies of your components match?

Encoding

Do you need a system with additional encryption to protect transmissions?

IP Rating

Will the components be installed outdoors or exposed to the elements?

RADIO TRANSMISSION

Secure Radio Frequency Access Control Solutions

CDVI's radio transmission solutions, featuring KeeLoq® rolling code technology, offer secure and efficient access control for users. This advanced system ensures encrypted communication, reducing the risk of unauthorised entry by dynamically changing access codes with every use. With robust 66-bit encryption and billions of code combinations, these solutions prevent code replay attacks. Synchronisation between transmitters and receivers is seamless, even if devices are temporarily out of range.

Users benefit from a user-friendly setup and a wide range of compatible products, ideal for all sorts of automation, such as gates, doors, and lighting.

CUBEKIT | Wireless radio kit with smartphone connection

CUBEPOWER 2 x S1TR2641E1

KEY BENEFITS

- Remote programming from a free smartphone app
- Memory for up to 250 transmitters and 100 smartphones
- Mobile credentials for fast and convenient automation triggering
- Robustly protected data with KeeLoq®
- Three different receivers to suit different project requirements

- Trigger automatic gates for a residential driveway with ease
- Automate warehouse or factory shutter gates for forklift access
- Switch on outdoor lights from your phone to improve safety
- Open garage doors remotely on approach, ready to drive straight in

The CUBEKIT is a wireless radio kit that is part of the CUBE X family of radio products. The CUBEKIT includes one 1-relay receiver and two handheld transmitters. This radio solution is a cost-effective way to modernise homes and businesses by automating doors, gates, elevators, lighting, and more.

The receiver (CUBEPOWER) is programmed and controlled remotely via the InstallerCUBE app available on iOS and Android. Another app is also available for end users specifically (UserCUBE), allowing them direct access. In addition, the CUBE X system enables relay triggering with mobile credentials for even faster access.

Installers who register on the InstallerCUBE app for the first time receive three mobile credentials for **free!**

Simple

Convenient

Secure

	CUBEKIT
MATERIAL	ABS
TECHNOLOGY	Radio frequency & Bluetooth
SECURITY LEVEL	High - AES128 encryption (with smartphone)
RELAYS	1 x C/NO/NC
TIME DELAY	From 1sec to 23h 59min 59sec
CHANNELS	1 per transmitter
FREQUENCY	433.92MHz
MODULATION	AM/ASK
ENCODING	KeeLoq® hopping code
CODE COMBINATIONS	2 ⁶⁴
MEMORY	Up to 250 transmitters and 100 smartphones
OPERATING MODES	Pulse, latch, timed
POWER SUPPLY	12 - 24 Vac/dc
CONTACT RATING	1A @ 30Vdc (NO), 6A @ 30Vdc (NC)
CONSUMPTION	120mA @ 12Vac (500mA at power up)

CUBE | 1-relay receivers with remote programming

CUBESIGNAL CUBEPOWER CUBE230

The CUBE Series are 1-relay receivers with mobile connection and AC/DC power input. They're ideal for automating doors, gates, lighting, and more. CUBE X enables the control and programming of receivers remotely via the InstallerCUBE app, and gives users the power to operate the system from their phone with the UserCUBE app and optional mobile credentials.

IP2X -30°C to +70°C

CUBESIGNAL CUBEPOWER CUBE230

- Relays:** 1, with pulse, timed, and latch modes
- Technology:** KeeLoq® hopping code, 433.92MHz, remote smartphone connection
- Memory:** 250 transmitters, 100 smartphones

RX128-XPL | High security 128-bit receiver, 2 relays

The RX128-XPL receiver from CDVI is equipped with AES128 encryption and KeeLoq® rolling code, meaning users can be confident in the privacy and security of their data. With two relays and memory for up to 500 paired transmitter buttons, this receiver is ideal for installations requiring both wireless activation, high security, and a Wiegand connection.

IP55 -10°C to +60°C

- Relays: 2 relays
- Technology: AES128 encryption, KeeLoq® hopping code, 433.92MHz
- Memory: 500 transmitter channels

STANDARD 1- OR 2-RELAY RECEIVERS

RX26-NANO

RX26-XPL

These standard receivers are small and versatile - perfect for automation and security projects such as wire-free control of gates, barriers, doors, and lights. The receivers include either one or two relays, as well as memory capacity from 85 to 100 transmitter channels. The RX26-XPL additionally benefits from an LCD menu screen, making configuration quick and easy.

IP2X -20°C to +70°C

RX26-Z | Compact miniature receivers

These miniature-size receivers are ideal for projects requiring wireless communication with limited space for installation. With all the components contained in a box just 80x80mm, you can incorporate radio transmission into even the trickiest of spaces for automatic gates, doors, roller shutters, awnings, and lights. The Z receivers are available with one, two or four relays.

TX128 | Hand-held transmitters with AES128 encryption

These hand-held transmitters are ideal for triggering automatic doors, gates, and lights in a high security environment. With data transmission protected by both KeeLoq® rolling code and AES128 encryption, the TX128 offer a high security solution over two or four transmission channels. Additionally, they are ergonomically designed for comfort and transmit up to 250m in open field.

IP2X -10°C to +55°C

- Channels: 2 or 4 buttons
- Technology: AES128 encryption, KeeLoq® hopping code, 433.92MHz
- Read range: Up to 250m in open field

DID YOU KNOW?

AES encryption secures wireless data by ensuring confidentiality and preventing interception. In AES 128, data is split into 128-bit blocks, making decryption nearly impossible without the unique, secret key. Only authorised devices can encode and decode transmissions, ensuring secure communication.

1- TO 4-CHANNEL HAND-HELD TRANSMITTERS

This range of hand-held radio transmitters is ideal for triggering automatic doors, gates, and lights. Ranging from one to four trigger buttons, they are perfect for keeping in the car or on a keyring to open driveway gates. These transmitters are compatible with all standard CDVI 433.92MHz receivers, and transmissions are protected by KeeLoq® hopping code to prevent interception.

IP2X -10°C to +55°C

TX26-S7 | Hand-held 4-channel transmitter

TX26-S7E4-ERN TX26-S7E4-ERP

Transmission solutions are ideal for automation projects in residential, commercial, and industrial settings. These stylish hand-held transmitters are ideal for attaching to keyrings. They trigger four different circuits from four separate buttons. The TX26-S7E4-ERP also includes a built-in proximity tag, making it a dual solution for both access control and transmission.

IP68 -10°C to +55°C

- Channels: 4 buttons
- Technology: KeeLoq® hopping code, 433.92MHz
- Read range: Up to 250m in open field

DID YOU KNOW?

When ordering a box of transmitters, you can batch-load them onto your receiver instead of registering each one individually. Simply enter the serial number of the first and last transmitter in the box, and the system will automatically upload all transmitters within that range.

NANO receiver, 1 relay

	GALEO-R
MATERIAL	Zamak® alloy
MOUNTING	Surface
TECHNOLOGY	Radio frequency
SECURITY LEVEL	Standard
READ RANGE	Up to 200m range in open field
DETECTION RANGE	n/a
CHANNELS	2, using A & B keys
FREQUENCY	433.92MHz
MODULATION	AM/ASK
ENCODING	KeeLoq® hopping code
CODE COMBINATIONS	2 ⁶⁴
DIMENSIONS	110 x 75 x 27 mm
WEIGHT	0.3 kg
CONSUMPTION	28mA (in operation)
BATTERY	3.6V Lithium battery

1- TO 4-CHANNEL TRANSMITTERS

TX26-DIN

DIN rail mount transmitter

- Channels activated by contacts changing from open to closed
- Ideal for industrial or domestic use with a DIN rail mount
- Trigger a signal from one cabinet to another

Example

When running cables between the video intercom system and the gate is difficult or not possible.

TX26-MC1

Universal single-channel transmitter

- Turns any standard contact into a radio frequency signal
- Open connections (push-to-make)
- Ideal for push-to-exit buttons when cabling is difficult (ie. glass doors)

Example

Trigger the opening or closing of the door from a receptionist's desk by pressing a button.

TX26-M1

Mains supply transmitter

- Up to 25 seconds transmission zone
- Power up the transmitter to restart the transmission
- Ideal for controlling any spare light switch

Example

Remotely control outdoor lighting in the garden or garage area.

DTRR1434 | Long-range Wiegand or standalone reader

This long-range solution offers real hands-free access control for an affordable cost. With a read range of up to 15m, users don't need to present their card directly to the reader. Just having it on their person is enough for the reader to pick it up. This is ideal for use in hospitals, care homes, warehouses, or anywhere else where hands-free access is more convenient.

Relays: 1 (standalone only)

Technology: Long-range transmission, 433.93 MHz

Memory: Dependent on access control system (Wiegand), 30 transmitter cards (standalone)

ACCESSORIES

DTXT5434

Hands-free long-range active card credential

Radio transmission the unsung hero of gate automation

If you’ve never used radio transmission in your access control installations, it’s time to give it a try!

Operating gates without leaving your vehicle has never been easier.

Whether it’s from a card stuck on the inside of your car window or a hand held model on your keyring, there’s an option for everyone.

ULTRA HIGH FREQUENCY

Introduction

WHAT IS ULTRA HIGH FREQUENCY?

Ultra High Frequency (UHF) refers to the range of radio frequencies between 300 MHz and 3 GHz (3000 MHz). This range of frequencies is commonly used for various forms of communication due to its ability to penetrate buildings and offer relatively short wavelength, which allows for the design of compact antennas. UHF is widely employed in television and radio broadcasting, WiFi frequencies, satellite communication, and microwave ovens.

The UHF range offers benefits like better penetration through obstacles and higher data capacity.

KEY BENEFITS AND USAGE OF U4GO

KEY BENEFITS

- Standalone mode for up to 7,560 UHF credentials & 100 remote keys
- Wiegand mode (26-, 30-, or 44-bit) to link to access control systems
- AES128-bit encryption to robustly protect data transmission
- Choose standard cards for inside the vehicle or adhesive stickers and tags for outside the vehicle

- Ideal for gates in industrial or reserved car parks
- Automate warehouse or factory shutter gates for forklift access
- Suited for logistical hubs such as container ports
- Restrict access to lorry drop-off and delivery bays

Simple

Choose from a range of RFID access credentials depending on your needs to complete your solution: cards, windshield stickers or numberplate tags.

Secure

The kits come supplied with AES128 encrypted receiver & transmitters. When connected to our ATRIUM controller, the whole data chain becomes secured.

Reliable

Our U4GO antennas read credentials up to 6 or 10 metres and detect equipped vehicles at a max speed of 80km/h.

ULTRA HIGH FREQUENCY

U4GO - UHF System for Gate Automation

The U4GO system by CDVI revolutionises automated gate access with advanced ultra-high frequency (UHF) technology, providing seamless hands-free operation for vehicles and pedestrians. It's ideal for residential, commercial, and high-security applications, offering robust weather resistance and discreet windshield installation.

Compatible with CDVI's ATRIUM access control, U4GO centralises credential management across multiple access points, streamlining operations and enhancing security. Multi-level credentials, including key fobs and RFID cards, ensure versatility for diverse user needs. By enhancing convenience and accessibility, particularly for those with mobility challenges, U4GO elevates property value and safety. Its intuitive setup and durable design guarantee reliable performance in various conditions, making it a perfect choice for modern access control needs.

ULTRA HIGH FREQUENCY

Kits

A10U48 | U4GO long range access kit, 10m, 865 MHz

U4GO makes it easy to control secure access to gated facilities with long range UHF credentials, which identify people and vehicles at a distance of up to 10 metres. The reader is backed by an interface that manages up to 7,560 tags and thanks to its own built-in receiver, up to 100 transmitters. The kits can be used in standalone or Wiegand modes.

IP55 -25°C to +80°C

- Detection range:** Up to 10m
- Technology:** UHF, 865-868MHz, Wiegand or standalone connection
- Memory:** Dependent on access control system (Wiegand), 7,560 tags (standalone), 100 transmitters

ACCESSORIES

ATU48
U4GO car sticker credentials, 865 MHz (pack of 10)

CONSUMPTION	350mA (650mA max)

ULTRA HIGH FREQUENCY

Kits

A6U48 | U4GO mid range access kit, 6m, 865 MHz

The A6U48 is part of the U4GO system for the identification of people and vehicles at a distance of up to 6 metres. The system operates in standalone or Wiegand mode. In standalone mode, outbound connections are via two output relays. The Wiegand mode facilitates smooth integration with access control solutions.

IP55 -20°C to +80°C

- Detection range:** Up to 6m
- Technology:** UHF, 865-868MHz, Wiegand or standalone connection
- Memory:** Dependent on access control system (Wiegand), 7,560 tags (standalone), 100 transmitters

Park smarter with U4GO

Commuting is stressful enough without added issues when parking. From unauthorised vehicles in your spot to forgetting the code to the gate, there’s certainly annoyances you could live without! U4GO creates a seamless solution so you can park smarter.

No stress, no codes, and no need to step out of your vehicle.

ULTRA HIGH FREQUENCY

High Security

RXU4GO128 | U4GO high security encrypted receiver

This high security receiver enables the U4GO readers to have a radio signal. It also allows for the addition of 100 hand-held transmitters to the system. This is ideal for manual gate operation in addition to U4GO credentials. It transfers data at AES128-bit encryption. This receiver is only used with the U4GO range.

ELECTRIC STRIKES

Introduction

FAIL SAFE OR FAIL SECURE?

Fail Secure

Power is applied to **unlock** the door

Fail secure locks keep assets **secure**. The default position of a fail secure lock is locked. That's why they are best suited for areas containing valuable assets or sensitive data.

Fail Safe

Power is applied to **lock** the door

Fail safe locks keep people **safe**. When power is lost, fail safe locks are unlocked. So if there was an emergency that caused a power cut, all the doors with fail safe locks would be free to open.

On emergency exits and escape routes, fail safe locks should be used regardless of cost implications.

Qualified installers should select the most appropriate lock type and mechanism for each door based on the best-suited combination of safety and security requirements.

WHAT DOES CONTINUOUS CURRENT MEAN?

Coils inside electric strikes act as relays to trigger the locking and unlocking actions. Larger coils sustain continuous operation longer.

A fail secure lock labelled continuous current (CC) or continuous rated has a coil size comparable to a standard fail safe lock, allowing it to handle current over extended periods without damage. In contrast, a standard fail secure lock would overheat and burn out if power was applied for too long, while a continuous rated lock's larger coil can handle prolonged use.

Example: For a small office building, a fail secure lock ensures the front door stays locked during a power outage to maintain security. However, if the door needs to stay unlocked during office hours, a standard fail secure strike's coil could burn out from prolonged use. A continuous current fail secure lock is ideal, allowing unrestricted access during working hours without damaging the coil, while remaining securely locked outside of those times.

ELECTRIC STRIKES

Robust High Quality Strikes

CDVI offers a comprehensive range of electric strikes in both EURO and ANSI formats, catering to various security needs from cost-effective mortice options to medium- and high-security solutions. All CDVI EURO strikes are backed by a robust five-year warranty and feature built-in Metal Oxide Varistors (MOVs), ensuring reliable performance when integrated with access control systems. These versatile locking devices are suitable for a wide array of door materials, including wood, glass, aluminum, UPVC, and steel, as well as fire-rated doors and pedestrian gates, making them ideal for diverse project requirements.

Monitored strikes incorporate a built-in microswitch with NO/NC contacts, providing real-time door status indication for enhanced security. Additionally, the Constant Current (CC) coils option in DC fail secure strikes allows for prolonged operation without coil degradation, ensuring extended durability and reliability. With CDVI's extensive offerings, there is a fitting solution for every access control need.

ARU-M | ANSI-style monitored strike, 12Vdc

The ARU-M is an ANSI-style monitored electric strike that can be adjusted between fail safe and fail secure as needed. Suitable for wooden or metal doors, this strike is robust, with a stainless steel jaw for added strength. The ARU-M is supplied with both a long and a short faceplate as well as a full fixing kit for metal doors, making it a flexible solution for a huge range of projects.

GPCF | Symmetrical fire rated strikes, continuous current

GPCF strikes offer high quality fail safe locking. They are supplied with a faceplate (TG1I). With one metric ton of holding force measured at the jaw, 120 minutes fire resistance under EN1634-1, and half a million duty cycles, these strikes are robust and highly secure. In addition, the MOV (metal oxide varistor) fitted inside protects your system from electric spikes.

SR1024	Symmetrical fail secure strike, 10-24Vdc, continuous current
T204	Surface RIM case, grey finish
T2080B	Surface RIM case, for outward opening door, brass finish
T2080G	Surface RIM case, for outward opening door, grey finish
T290	Stainless steel faceplate with deadbolt cut-out
T290SR1024	Symmetrical fail secure strike with faceplate, 10-24Vac, continuous rated
TG1I	Standard stainless steel faceplate

Rim Housing vs Faceplates

When installing strikes, take note of the type of latch used. Is it mortice into the door, or is it surface mounted, like a night latch?

If the latch is mortice, you just need the supplied faceplate. However, if the door has a surface mounted latch, then you'll need a rim housing.

Our G Series strikes include a rim housing in the kit. Our S Series strikes don't, so you will additionally need a T204 rim housing.

Rim Housing - For doors fitted with a surface latch mechanism

Faceplates - For doors with a mortice latch mechanism

TOP TIP!

An S Series strike provides more room for wiring than a G Series when fitted into a rim housing

300KG OR 500KG MAGLOCKS?

When fitting maglocks, it's essential that you look closely at the environment where they'll be installed. The location plays a large part in the type and strength of maglock that's required. A common error that we encounter is maglocks of inappropriate strength installed in the wrong places.

Internal doors

For internal doors, the holding force required depends on the use of the door. If the door just needs to be held closed to prevent people freely gaining entry, then a 300kg maglock is plenty. In normal usage, nobody is going to exert 300kg of force on a closed door. Greater holding force isn't necessarily needed just to manage controlled access to a certain room, floor, or area.

Secure internal doors

If the internal door is designed to keep its contents secure, then we recommend 500kg holding force at a minimum. Higher holding force can also be achieved with multiple maglocks on transom housings or magnetic handles, for instance.

External doors

There are two scenarios: If the maglock is just to hold the door closed during active hours, a 300kg maglock suffices, with another locking device needed for overnight security. If the maglock is the sole locking device for security, a minimum 500kg holding force is required.

Note: Maglocks can be used as the primary locking mechanism when the building is unoccupied. However, a mechanical deadlock should also be installed to secure the door.

TIPS AND TRICKS FOR MAGLCOK INSTALLATION

Safety Rope

CDVI malglocks come with safety ropes. These short steel ropes keep the magnet in place and prevent it slipping out of position and falling on someone if it should become damaged, loose through poor installation, or maintenance. This reduces the risk of injury.

Every maglock we supply comes with safety ropes and can be purchased as spares if further are needed.

Threadlock

This magic little bottle of glue helps to secure bolts and fixings on the maglock to keep them in their proper place. Over time, with the operation of a maglock, fixings can be gradually loosened due to tiny vibrations. Threadlock helps to prevent this and prolong the operational lifetime of the magnet. It bonds in less than 10 minutes and fills gaps to 0.25mm. Top tip: use Threadlock!

Be aware though – don't think Studlock will suffice instead if you don't have or can't get Threadlock. If you use Studlock, the screws will NEVER come out. You have been warned!

Maintenance

For maglocks to keep performing at their best, they need regular basic maintenance.

One of the most basic things you can do to prolong the performance of your maglock is regularly clean and wipe it down. The air is naturally full of lots of tiny particles that make up dust. Some of those particles will be metallic, particularly in an industrial environment. If those metallic particles are settling on the surface of your maglock and not being wiped away regularly, they can affect the performance of the lock.

ELECTRO-MAGNETIC LOCKS

High Quality Magnetic Locking from CDVI

CDVI delivers a comprehensive range of magnetic locking solutions designed to provide secure, efficient, and aesthetic access control. Our low-consumption maglocks are engineered to minimise energy usage, offering a significant reduction in operating costs and environmental impact without compromising holding strength or reliability.

Furthermore, investing in high-quality maglocks, such as the V3SR range, ensures superior durability and dependable performance under heavy usage. The advanced designs incorporate innovative materials and precise engineering, ensuring long-term resilience and minimal maintenance needs. This commitment to excellence guarantees safety, energy savings, and cost-efficiency while reducing carbon footprints.

CDVI combines powerful magnetic locks and cutting-edge technology with sustainability to deliver value-driven solutions for diverse applications.

Micro Power Locks

HSM-600SB | Micro power lock for outward-opening doors

Micro power locks are ideal for automatic doors, especially where space between operators is too narrow for conventional maglocks, or where the armature intrudes on the safety sensor position. The armature plate is supplemented by a strong alloy pin, creating a mix of mechanical and magnetic holding force. This 680kg model is available in a single or double format.

Holding force: 680kg maglock

Installation: Suitable for single or double doors where standard size maglocks don't fit

Environment: Ideal for internal use

Shearlocks

MORTICE SHEARLOCKS

Our shearlocks provide a robust locking solution suitable for aluminium and wooden doors with a narrow transom. They offer holding force of 1,200kg or 1,500kg. The CZ3000 has a patented self-aligning technology, suited for single or double action doors that don't always rest in the same position. Meanwhile, the SHL1200 is ideal for single action doors which always rest in the same position.

Note: Shearlocks are NOT suitable for escape doors.

WE ARE GOING GREEN

What's more important than the sustainability of our collective home?

At CDVI, we're dedicated to making real change. We're changing the way we do things in order to reduce our impact on the environment and foster a sustainable business plan for the future.

#cdvigoesgreen

Reducing Our Carbon Footprint

We're committed to doing better in every part of our business.

This means creating better products, using better packaging, and embracing better practices to reduce our carbon footprint as much as possible.

Changes we've made to our products

Low Energy Maglocks

We've reduced power consumption in all our internal maglocks as part of our effort to go green. The newer versions are more efficient, more sustainable, and cheaper to run.

For example, with our V3SR maglock, the previous version was rated at 500mA, while the new one uses just 290mA.

The reduction means that less electrical energy is needed to keep the maglock securely locked. Using less electricity means end users spend less on energy bills — **about 42% less!**

Magnetic Pull Handles

We're making every effort to reduce our environmental impact, starting with the raw materials used to create the handle housings and ending with how we package them for customer delivery.

We decided to use a new type of aluminium for our handles. The supplier we chose produces a specific type of aluminium that is made with renewable energy from hydroelectric, solar, and wind power sources. It is intended to be a low-carbon aluminium.

Find out more at: cdvi.co.uk/sustainability

MAGNETIC HANDLES

Introduction

HOW IT WORKS

Magnetic architectural handles consist of electro-magnetic locks mounted into special housings. The magnets fit to the transom or door frame, while the armature plate is part of the handle housing that fits to the door leaf.

The user opens the unlocked door by holding onto the armature housing on the door leaf and pulling the door away from the deactivated magnets.

By the nature of electro-magnetic locks, architectural handles are fail safe solutions.

When power is applied, a strong magnetic field is created between the magnets and the armature plate, holding the door closed. When power is removed, the magnet releases and the door can be freely opened.

Durable solutions

Combining strong magnetic locking with robust *Satin Anodised Aluminium* housings makes handles ideal for high traffic sites.

Low carbon footprint aluminium

Low power consumption

Packaging savings

...and much more!

CHOOSING THE RIGHT MAGNETIC HANDLE

Which handle?

First, choose whether a shorter handle or a full-height handle is best for your project. Full-height handles cover the whole edge of the door leaf. These handles deliver the highest holding force, as up to three 400kg magnets can be fitted into them. Additionally, as the holding force is spread evenly along the door's height, the risk of the door bending or breaking by force is significantly reduced.

Which features?

Next, decide if your project requires LED status indication on the handle. The EVO range includes a blue/green LED at the top of the magnet housing section, turning green when the door is unlocked and can be safely opened.

Which colour?

The housings on magnetic architectural handles can be powder-coated in any RAL colour. In some cases, this is to give a sleek and attractive finish where the housing blends in seamlessly with the surrounding door frame. In other cases, a contrasting colour is chosen deliberately in order to make the housing stand out, for safety or aesthetic purposes.

MAGNETIC HANDLES

Robust Magnetic Locking Solution With Architectural Handles

CDVI offers an impressive and versatile range of magnetic architectural handles, designed to combine sleek aesthetics with exceptional functionality. These handles are a modern locking solution that ensures both style and security, with holding forces ranging from 300kg to a robust 1200kg, making them suitable for a wide variety of applications. The collection includes shorter models ideal for smaller spaces and full-height options that make a bold statement while maintaining maximum utility. These handles can be easily fitted to new builds or retrofitted onto existing doors.

These handles are adaptable for indoor and outdoor use, fitting a variety of settings. For an added layer of customisation, the handles can be powder-coated in a specific RAL color, enabling them to harmonise with or provide a striking contrast to the surrounding door frames. This ensures the handles are both functional and visually appealing. Furthermore, the EVO range stands out with its innovative visual LED feedback feature that provides real-time status updates for door activity. This feature is practical and stylish, meeting the demands of modern architecture with durability, customisation, and ease of integration.

MAGNETIC HANDLES

Short Handles

P300 | 300kg architectural handles

These shorter handles provide 300kg holding force via one monitored maglock. Install them indoors or outdoors for reliable, user-friendly electronic locking in high traffic zones. Additionally, the P300EVO indicates the status of the door (open or closed) with LEDs. The P300RP is fire rated under EN1634-1 & 2 for 30 minutes. Optional spacers and cable trays help to achieve a better aesthetic finish.

- IP66 IK10 -20°C to +60°C
- IP42 (P300EVO)

- Holding force:** 300kg
- Installation:** Fits new or retrofit installations
- Door status indication:** Audible and visual feedback with bi-coloured LEDs

MAGNETIC HANDLES

Short Handles

P600 | 2 x 300kg architectural handles

These handles provide up to a total of 600kg of holding force across 2x 300kg maglocks. Manufactured from low-carbon aluminium, they are a more sustainable and durable choice for magnetic locking. In addition, the P600EVO indicates the open or closed status of the door with an LED at the top of the handle. For a tidier and more discreet finish, opt for spacers and cable trays.

LOCKING JARGON YOU NEED TO KNOW

SWING DOOR
A swing door is a type of door fixed to the door frame with hinges along one side.

DOUBLE ACTION
A double action lock is one that can be used with doors that swing in both directions. These locks can both latch and be locked as normal.

FAIL SAFE
Fail safe locks are unlocked when power is removed. Power must be applied to the lock in order to secure the door and prevent access.

FAIL SECURE
Fail secure locks are locked when power is removed. When power is applied, the lock is released and the door is free to open.

MONITORING
Monitoring refers to technology which allows certain products such as electro-magnetic locks to record and report their status to a central system. This allows security officers to see the live status of a lock and record the history of access events.

CONTINUOUS CURRENT
In locking, CC stands for continuous current or constant current. This is a type of direct current (DC) that does not change intensity over time. It allows systems to maintain the same voltage level regardless of variations in current.

COIL
Inside electric strikes, there are coils. The coil is energised or de-energised to release or lock the strike. The larger the coil, the longer it can sustain continuous operation.

METAL OXIDE VARISTOR
A metal oxide varistor (MOV) is used in parallel across an inductive load such as a maglock. It provides circuit protection from 'Back-EMF' produced by the lock to devices connected to the lock when it is de-energised.

SURFACE
A surface mounted device is one which is installed and fixed on top of the wall or surface, so that the body of the device protrudes.

FLUSH
Flush mounting (also known as mortice mounting in reference to locks) is the installation of a product set back into the surface of a wall, so that the surface of the product is aligned with the wall.

MORTICE
Mortice (or mortise) refers to one of the two methods for mounting a lock onto a door. Mortice locks are mounted into the body of the door itself, meaning a pocket must be cut into the door in order to install the lock. The opposite is a surface mount lock.

HOLDING FORCE
Holding force is a measure of the strength of a lock. Measured in kilograms or pounds, holding force indicates the amount of weight that would be required to break the lock.

SIDE LOAD
Side load, sometimes known as sideload or pre-load, is the force applied to a locking mechanism from the side of the lock rather than directly in line with it. Some locks are unable to operate normally under the effect of side load. Side load can also damage locks' mechanisms, impacting overall operational effectiveness and security.

SHEAR FORCE
Shear force is a force that acts parallel to a surface, causing it to deform or slide. A shearlock or shear lock is a type of electric lock which adds to the security of a standard magnetic lock with pins or bolts which position themselves into the opposing armature plate, providing high holding strength. If the magnet fails, the lock still opens as it's fail safe. Shear locks require alignment and are not suitable for escape doors.

ELECTRIC LOCKS

High Quality Electric Locking

Electric locks offer the ideal combination of fast and convenient access and monitoring, whilst providing high security locking.

CDVI's range of electric locks includes both fail safe and fail secure models, each suited to different security contexts, solenoid bolts, self-aligning shearlocks, double-action locks, and motorised deadbolts. The holding force of the range starts at 650kg and goes up to 1500kg for high security settings.

Some models feature a built-in varistor, which effectively eliminates back-EMF and protects sensitive trigger devices such as keypads and access control units.

ELECTRIC LOCKS

Solenoid Bolts

DX200I | Fail safe solenoid bolt, monitored

The DX200I is a fail safe solenoid bolt locking device manufactured in high quality stainless steel. It monitors the full door and lock position statuses, ensuring better security visibility. In addition, this lock is equipped with a retry circuit which activates automatically if the door is not correctly aligned. This helps maintain smooth operation and robust security even if the door rests slightly out of position.

ELECTRIC LOCKS

Double Action

ML-210N-SW | Reversible 650kg electric lock

The ML-210N-SW is an ideal solution for doors requiring a latch-type locking arrangement with high quality components and durability (it's tested for 1,000,000 cycles). This lock is suitable for horizontal or vertical mounting and double action door sets. Manufactured from stainless steel and featuring 650kg holding force, this lock is selectable between fail safe and fail secure modes.

ELECTRIC LOCKS

Double Action

ML-300-SW | Reversible 650kg EURO cyclinder electric lock

The ML-300-SW provides EURO cylinder operation in the ML solenoid-type locking range, suitable for vertical mounting and double action door sets. It provides high quality locking and long-life operation (tested for 1,000,000 cycles). Manufactured from stainless steel and featuring 650kg holding force, this lock is selectable between fail safe and fail secure modes.

-10°C to +49°C

- Lock mode: Fail safe or fail secure
- Voltage: 12-24Vac/dc
- Monitoring: Yes

ELECTRIC LOCKS

Double Action

ML-350M | Compact 650kg electric lock, fire rated

The ML-350M is an ideal solution for doors requiring latch-type locking with fire certification, 650kg holding force, and 225kg of preload operation. It can be mounted horizontally or vertically on double action doors, and features a bi-directional snib and full monitoring status. Manufactured from stainless steel, this lock is fail safe and thus suited for emergency escapes.

-10°C to +49°C

- Lock mode: Fail safe
- Voltage: 12Vdc or 24Vdc
- Fire rating: EN14846 (60 minutes)

MV | Motorised electric deadbolts

These motorised locks offer non-handed electronic deadlocking for heavy-duty doors and cages. Nylon gears ensure smooth, silent, rust-free operation, while a varnish coating protects the electronics for outdoor use. The MVA and MVM include a manual override with a circular key cylinder that fits 40-90mm doors/gates and three keys. They replace a standard night latch on regular doors.

IP57 -25°C to +70°C

- Lock mode:** Motorised deadbolt (automatic relocking)
- Voltage:** 12-18Vdc
- Monitoring:** No

IP RATING

IP (Ingress Protection) is an industry-recognised IEC rating (IEC 60529) that measures a product’s resistance to liquids (like rainwater) and solids (like dust or sand) entering its internal components, potentially causing damage like electrical shorts or circuit interference.

IPXX

Measured on a scale from 0-6
Indicates protection against solids

Measured on a scale from 0-8
Indicates resistance to liquids

- 0** No protection

1 Protected against solid objects over 50mm (e.g. accidental touch by hands)

2 Protected against solid objects over 12mm (e.g. fingers)

3 Protected against solid objects over 2.5mm (e.g. tools and wires)

4 Protected against solid objects over 1mm (e.g. tools, wires and small wires)

5 Protected against dust – limited ingress (no harmful deposit)

6 Completely protected against the entrance of dust.
- 0** No protection

1 No water should enter when it falls from 200mm in height from the equipment, for 10 minutes (at a rate of 3-5mm³ / min)

2 Protected against direct sprays up to 15° from vertical.

3 Protected against direct sprays up to 60° from vertical, at 11 L/min and 800-100 kN/m², for at least 5 minutes.

4 Protected against sprays from all directions, at 10 L/min and 800-100 kN/m² for at least 5 minutes—limited ingress allowed.

5 Water jets from a 6.3 mm nozzle, averaging 12.5 L/min at 30 kN/m², must not penetrate for over 3 minutes from a minimum distance of 3 metres—limited ingress allowed.

6 Water jets from a 12.5 mm nozzle, at 100 L/min and 100 kN/m², must not penetrate for 3 minutes from at least 3 metres (e.g., for ship decks)—limited ingress allowed.

7 The equipment must endure full immersion between 15 cm and 1 m for 30 minutes without any leakage.

8 Protected against long periods of immersion under pressure.

Both IP and IK ratings ensure durability against both mechanical impacts and environmental factors like wind and water.

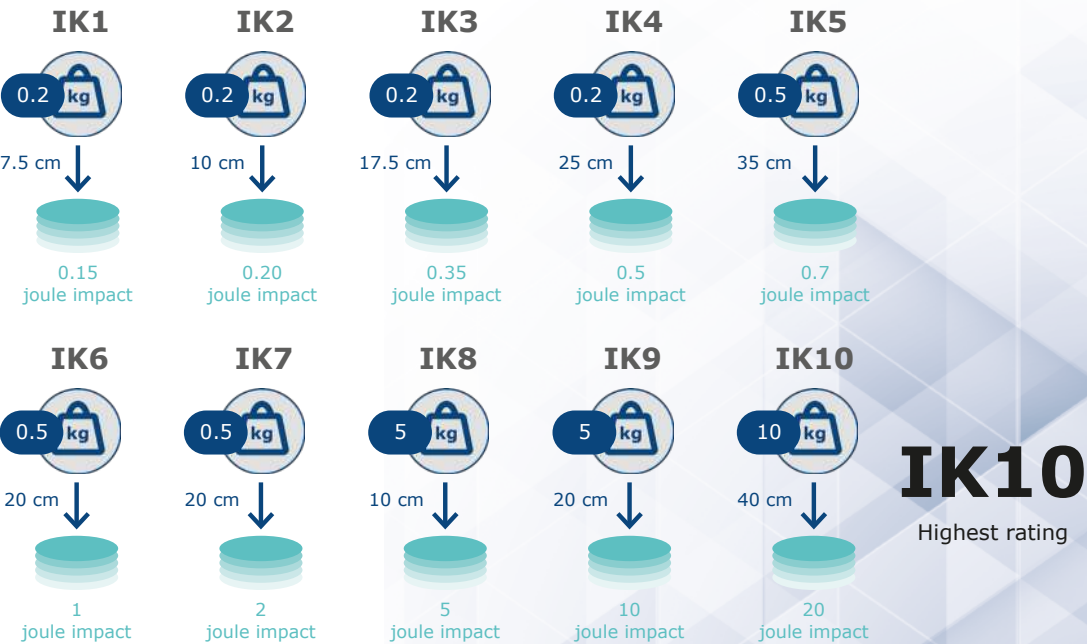

IK RATING

IK0

No protection

IK ratings (Impact Protection), with the K standing for “kinetic,” are defined by IEC 62262 to measure a product’s resistance to mechanical impacts, such as knocks, vandalism, or storm debris. They are essential for devices in high-traffic or vandalism-prone areas to prevent damage, costly repairs, and security risks.

ACCESSORIES

Accessories to Complement Your Installation

CDVI offers a full range of accessories, ancillaries, and complementary devices to complete any entry project from end to end.

Exit buttons and devices, including novel touchless models, are available in a variety of sizes, styles, and formats for any interior environment. Almost all our push buttons fit the standard UK back-box format, and can be mounted on the RPSS-CUT mounting post. With the addition of a universal transmitter such as TX26-MC1, push buttons can also be made wireless.

Further accessories include door loops, timers, and relays - all designed to create a seamless and cohesive door entry solution.

RTE-85 | All-active exit buttons with green graphics

These all-active exit switches are ideal for environments where users may have difficulty targeting a smaller button, such as care homes, high traffic areas in hospitals, public buildings, and educational facilities. "All active" means the complete surface area of the face activates the switch, making it easier to target. They are available as surface or flush mounting configurations.

IP65 -20°C to +55°C

- Environment:** DDA compliant and suitable for high traffic areas
- Technology:** All-active switch
- Feature:** Green button edging with wheelchair or EXIT logo

RTE-PTO | Large all-active exit buttons

These all-active push-buttons provide a large target area for users with mobility difficulties. Manufactured in high-grade stainless steel in a surface mount format, the RTE-PTO series are hardy and suitable for high traffic or DDA environments. "All active" means the complete surface area of the face will activate the switch, making it easier to target.

- Environment:** DDA compliant and suitable for high traffic areas
- Technology:** All-active switch
- Feature:** Blue writing with PUSH TO OPEN or PUSH TO OPEN & wheelchair logo.

METAL-BOXED SWITCH MODE POWER SUPPLIES

PSMB123 PSMB125 PSMB242

These metal-cased switch mode power supplies range from 2.5A to 5A rated current. They are ideal for applications requiring standby battery capability. The units are regulated with highly stable output, supplying full rated current to load and a universal mains voltage input range (190-265Vac). With 80-87% efficiency, users can reduce their power bills and carbon footprint.

ADC | DIN switch mode power supplies

ADC324 ADC335

The ADC are 12V or 24V DIN-rail switch mode power supplies, with full stated current to load – meaning they reliably deliver all the current they promise. They are fuse protected on both the primary and secondary circuits. Constructed of polycarbonate, ADC power supplies are extremely safe, making them ideal for powering external gate locks or magnets.

IP20 -10°C to +40°C

- Voltage:** 12Vdc or 24Vdc
- Current:** 3.5 or 2 amps
- Usage:** Ideal for electric locking devices (maglocks, strikes, and locks)

DID YOU KNOW?

A **fuse** is a safety device with a thin metal strip that melts when excessive current flows through it, breaking the circuit and stopping the power supply.

Fast-blow fuses are used in low-voltage power supplies for sensitive electronics, while slow-blow fuses are preferred for circuits with inrush currents, such as motors or transformers.

CA1 | Class II transformers, 12Vac and 12/24Vac

The CA1 are economical transformers which reliably deliver 12 Vac or 24 Vac from a 230 Vac power supply. Additionally, they benefit from short circuit protection. Ideal for running a simple keypad and electric strike, these transformers are perfect for small-scale installations.

IP20 -20°C to +60°C

Voltage: 12Vac or 12/24Vac

Current: 1A

Usage: Ideal for running AC powered and fail secure electric strikes

DID YOU KNOW?

AC (Alternating Current) works by periodically reversing the direction of electron flow. Unlike DC (Direct Current), where electricity flows in one constant direction, AC continuously switches between positive and negative voltages.

NEXT-DAY DELIVERY

Next-Day Delivery

For instant purchases without modification when ordered before **3:45pm**

Lead Time

- ✓ 7-10 working days for spraying
- ✓ 3 weeks for custom-made posts

POSTS

Range of Reader & Intercom Posts

CDVI offers a range of ready-made posts to complement and optimise any access control or door automation project. Balancing aesthetics and practicality, our posts are suitable for any non-coastal environment.

Posts are an ideal aesthetic mounting solution, with high-grade stainless steel and models covering both lorry and car/wheelchair users as well as pedestrians. The hardened grain finish offers a clean, modern design.

For projects with more focus on practicality, the GNP range of posts is ideally suited for car/lorry parks. Manufactured from steel and powder-coated in a black finish, these models are sturdy and robust.

CDVI's posts are all eligible for next-day delivery. Bespoke posts can also be made on request, with custom RAL colour options.

POSTS

Goose Neck

GNP | Car- and lorry-height goose neck posts

The GNP series are goose neck posts with mounting plates at car- and lorry-height. They are ideal for mounting readers or intercoms at entrances to car parks, offices, or residential developments. Constructed of high grade steel with a hardened black powder-coat, GNP posts balance aesthetics and practicality in any non-coastal environment.

- Environment:** Suitable for outdoor use in any non-coastal environment
- Material:** Powder-coated black steel
- Usage:** Car- or lorry-height

Angled Top

RPSS | Angled top stainless steel posts, 100mm pole

The RPSS Series are stainless steel posts with an angled top for mounting readers, keypads, intercoms, or exit buttons. Balancing aesthetics and practicality, they complement a wide range of projects in any non-coastal environment. Manufactured in the UK from high-grade stainless steel, the RPSS can be sprayed in any custom RAL colour to suit the needs of your project.

- Environment:** Suitable for outdoor use in any non-coastal environment
- Material:** 304 high grade stainless steel
- Usage:** Ideal for pedestrians

2EASY 2-WIRE OR IP SYSTEM?

2-WIRE

Capacity
Up to 128-way audio and video communication

Wiring
2 wires (optional Ethernet)

Power Supply
12-24V

Network
Operates on its own network

App
Free smartphone app

Integration
Wiegand connection to ATRIUM access control

Benefits

Not affected by internet connectivity

Independent cabling

Lower latency levels (immediate communication)

Cost-effective for smaller projects

IP

Capacity
Up to 256 monitors as standard
(up to 8,000 monitors with extension - contact CDVI Support)

Wiring
IP Ethernet

Power Supply
PoE (Power Over Ethernet)

Network
Adds on to existing building networks

App
Free smartphone app

Integration
Connects up to 4 CCTV IP cameras

Benefits

Network connectivity

Call divert through mobile phone with WiFi connection

Simple add-on cabling

Larger scalability with limited disruption

VDP CONNECT SMARTPHONE APP

Download VDP Connect on the app store today!

Manage your home from your phone with the **VDP Connect** app. Door station calls divert to the app instantly or after 30 seconds if unanswered at the monitor. See, hear, and grant access to visitors remotely by answering the call and tapping a button to unlock the door.

VIDEO ENTRY

Residential & Commercial Video Entry Solutions

2EASY is an innovative video door entry system designed to provide a secure and highly reliable solution that’s simple to install and easy to operate.

Offering either a simple 2-wire format or an innovative IP format, 2EASY is more flexible and scalable than ever. With its easy PoE connection,the 2EASY IP range can be expanded up to 8,000 networked monitors. Ideal for private residences and apartment blocks, 2EASY integrates seamlessly with ATRIUM access control for a comprehensive entry system.

With no monthly or annual subscription cost and a robust two-year warranty on all 2EASY products, end users benefit from the peace of mind of a trusted and secure system.

Today, CDVI has grown in many directions from manufacturing only keypads and power supplies. We now make locking devices, online and standalone access control, door automation, intercoms, and a wide range of accessories.

The Group consists of four R&D offices, three main manufacturing plants, and eleven sales offices around the world, on four continents. The Group has grown through opening subsidiaries in new countries, as well as by acquiring other companies.

1985

Creation of CDVI

1998
